DETAILED ACTION

Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 1-4 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

As to claim 1, it is unclear how a hole can have a surface area ranging from about 0.8cm2 to about 5.0cm2. It would seem impossible for a hole, which has an opening to have a surface area.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 1-4 are rejected under 35 U.S.C. 103(a) as being unpatentable over Goldberg et al U.S. Pat. No. 5,102,404.

Goldberg discloses a drip chamber in a cerebral spinal fluid drainage system comprising: a tube having an outer surface (figs. 2 and 4); a vent (fig. 4); a filter (36) made of hydrophobic porous material wherein the pore size of the filter ranges from greater than .45um to about 5.0um (36). However, it is not clear if Goldberg discloses a

Art Unit: 3763

vent having a surface area ranging from about 0.08cm2 to about 5.0cm2 primarily because the claim is unclear. However, it would have been obvious matter of mechanical efficiency with one have ordinary skill in the art at the time the invention was made to vary the size of the surface area ranging from about 0.08cm2 to about 5.0cm2, since applicant indicated in the specification that the aforementioned size range is preferable, but not critical, and since such a modification would have involved a mere change in the size of a component. A change in size is generally recognized as being within the level of ordinary skill in the art. In re Rose, 105 USPQ 237 (CCPA 1955). Basically, applicant's ranges lacks criticality and One of ordinary skill in the art, furthermore, would have expected Applicant's invention to perform equally well with the surface area of Goldberg because the are in the same field of endeavor. Therefore, it would have been an obvious matter of design choice to modify a drip chamber of Goldberg to obtain the invention as specified in claim 1.

As to claims 2-4, (figs. 1 and 2).

Double Patenting

The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Application/Control Number: 10/698,125

Art Unit: 3763

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

Claims 1-4 are provisionally rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1-4, 6-13, 16-22, 24-31, 33-37, 39 and 40 of copending Application No. 09/266,674. Although the conflicting claims are not identical, they are not patentably distinct from each other because the claims in both applications are directed to a drip chamber comprising: a tube, vent, filter and surface area.

This is a <u>provisional</u> obviousness-type double patenting rejection because the conflicting claims have not in fact been patented.

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Kevin C. Sirmons whose telephone number is 571-272-4965. The examiner can normally be reached on Monday-Friday 6:30-4:00 ALT FRI.

The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.
